

Take Charge of Your Network and Applications

With network traffic growing exponentially, application performance and WAN optimization are two of the biggest IT challenges that organizations face. Until now, network managers and administrators lacked a comprehensive solution for monitoring and managing network resources and bandwidth while meeting user expectations for fast application response. Exinda revolutionizes the way organizations manage their network by offering an affordable and easy to use appliance that delivers visibility, control and optimization.

Unified Performance Management

Many organizations rely on a number of different point solutions for network monitoring, reporting and application acceleration. This approach adds complexity and increases the administrative burden on IT staff. With the Exinda Unified Performance Management (UPM) solution, all of the core capabilities needed to effectively manage a WAN are incorporated into a single network appliance. These tightly integrated capabilities include real-time monitoring, reporting, traffic control, optimization and intelligent acceleration. Users can toggle between a simplified or advanced interface and may also choose a centralized management platform for controlling multiple appliances across the network.

By dramatically simplifying WAN optimization, Exinda empowers organizations to improve application performance, lower network operating costs, defer costly bandwidth upgrades and increase productivity by reducing the time employees spend waiting for slow applications to respond.

The Exinda Value Proposition

- Improve application response times
- Accelerate more than 1,000 applications
- Identify and prioritize all network traffic
- Guarantee bandwidth for critical applications
- Control recreational peer-to-peer (P2P) traffic

Why Exinda?

- Integrated visibility, control and optimization
- Affordable, all-in-one appliance lowers total cost of ownership
- Rapid implementation and easy centralized management
- Industry-leading support for Microsoft® Active Directory
- Technology proven in over 2,000 customer implementations worldwide
- Solution backed by unparalleled product support and expertise

Before Exinda

- WAN activity is chaotic and uncontrolled
- Limited visibility into Internet traffic
- Slow applications
- Bandwidth congestion
- Aggressive recreational traffic impedes application performance

After Exinda

- Clear view of all WAN activity
- Precise policy-based traffic management
- Applications are prioritized
- Bandwidth is allocated to high-priority users and traffic
- Applications are accelerated with faster response times
- Recreational P2P traffic is controlled
