BESECURE
WEB FILTER
MODULE

The Internet is a business tool, but in the dynamic web environment it poses significant productivity and security challenges for organizations. Organizations are faced with the problem of establishing an acceptable web usage policy, maintaining it, and reporting on its effectiveness.

The BeSecure Web Filter Module enables organizations to understand, filter, monitor, and report on internet usage. Allowing employees to take full advantage of the Web without compromising business goals.

Web Usage Controls

The BeSecure Web Filter Module is the only appliance that combines Category-based filtering with Real Time Expression Filtering and Reputation-based filtering, creating the best and most dynamic web filtering protection available.

Reduce risk while boosting productivity understand, filter, and monitor Internet use to align with business goals, reduce legal liability, maximize employee productivity, and preserve bandwidth for business-related activities.

Expansive category-based filtering through the *TrustedSource Web Database* providing a proven repository of more than 30 million websites with over 90 categories.

Scan down to the keyword level with *Wedge Real Time Expression Filtering* scanning doesn't stop in the URL. Content is inspected down to individual words and patterns contained within web traffic and fully customizable with regular expressions. enabling organizations to prevent the leakage of confidential information leaving the organization through Internet protocols.

True Reputation-based filtering enhances category-based filtering with up-to-the-moment intelligence powered by *TrustedSource™*. Allowing your company to benefit from information about content sources and risks gathered across the entire Internet; in the same way a credit agency provides credit scores. Using this real-time scoring the BeSecure Web Filter Module pro- actively and reliably blocks the latest Web 2.0 threats and malware before they can enter your network.

Stop Data Theft, Keyloggers, and call home viruses from sending information out of your network by blocking outbound traffic from contacting malicious sites.

BeSecure Anti-Virus scanning for protection against malicious code from unknown or compromised legitimate sites.

Integration

Fully Integrated with the *BeSecure Anti Virus* **and** *Anti Spam Modules* to allow dedicated security policies to be deployed across the web and email with a single appliance.

Built for performance with the *Subsonic Engine's* unique traffic handling, the resource needs for Web Filtering are easily handled while allowing room for organizations to grow and add additional protection modules without altering user experience.

Seamless network integration with the ability to deploy through Stealth Transparency, BeSecure integrate into networks without changing any network or routing settings. Also traditional proxy and bridge deployment modes allow for maximum flexibility.

Reporting

Business reporting through the *BeSecure Reporter* or automatic integration with existing reporting solutions the Wedge solutions help provide in-depth and use able information to align Web Filter management with business direction.

Reporting for the organization, reporting for the user. From high level organization wide usage to individual drill down; identify usage trends, document inappropriate web activity, and take action to ensure the web is an enabler for business goals.

Automated reporting tools to fully customized dashboards allows you to start creating reports out of the box, and then customize what information you want to highlight, who receives it, and how it is displayed. Fully tailor your web filtering reporting to best suit your unique needs.

Management

Granular and customized policy allows organizations to dive deep into filtering policies. Filter by user group, time of day, day of week, categories, even URLs.

Reduced TCO with the performance to handle increased network loads and the ability to provide integrated web and email security functionality in a single appliance, BeSecure reduces complexity and cost of security while dramatically increasing the efficiency and protection levels.

Automated updates and policy enforcement ensure organizations web usage standards are maintained as new sites are created without maintenance from IT staff.

Reliability inside and outside the box with full high availability and clustering functions, BeSecure Appliances ensure the highest level of fail over and redundancy. The appliances themselves are built with no moving parts and capable of handling the most punishing bandwidths and networks to make certain downtime will not be an issue.
